01 Profile

I am an Aeronautical and Astronautical Engineering undergraduate at Afe Babalola University (ABUAD) and a Co-Founder, Co-CEO and CFO of ALCHIVON. Everything I know about software and design I taught myself, starting with HTML and CSS, then JavaScript, then the programming and CAD tools I use for engineering work. This portfolio is an honest picture of where that stands today: what I can build, what I have built, and what I am still learning.

♥ INTERESTS

Aerospace Engineering

Software Development

CAD Design

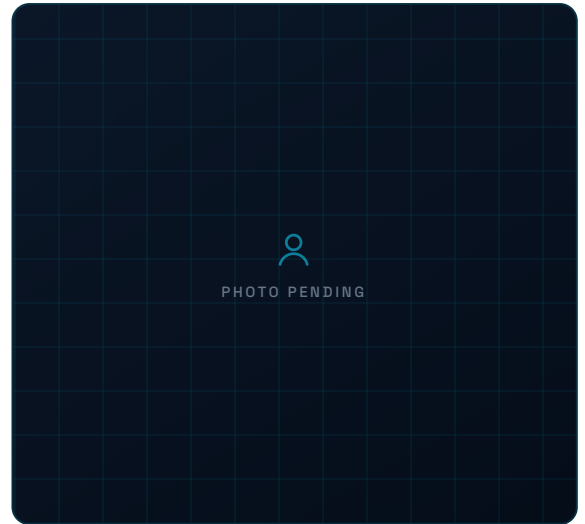

Game Development

3D Animation

Technology

Entrepreneurship

Engineering Innovation

CHIJINDU NWIGWE FRANCIS

🎓 EDUCATION

- Afe Babalola University (ABUAD)**
[B.Eng in Aeronautical & Astronautical Engineering](#)
Currently 200 level · Expected graduation 2030
- Oritamefa Baptist Model School**
[Secondary education](#)
Graduated 2024
- Saint Isabel Primary School**
[Primary education](#)
Graduated 2018

👤 AT A GLANCE

LOCATION	Nigeria
ROLES	Co-Founder · Co-CEO · CFO ALCHIVON
LEARNING ROUTE	Self-taught
LANGUAGES	English · Igbo
CERTIFICATIONS	None, self-taught

📍 WHERE MY WORK SITS

Software Development

Front-end interfaces in HTML, CSS and JavaScript, with C++, Python and Node.js for logic and back-end work.

Engineering & CAD

Technical drawing and part modelling in AutoCAD and Autodesk Inventor, alongside aerospace coursework.

Design & Visual Work

Graphics and brand assets in CorelDRAW and Photoshop, moving into 3D with Blender.

📌 On honesty. I have not shipped commercial client websites. The builds in this portfolio are the ALCHIVON company site, my own portfolio, and demo projects I made to learn. Everything is labelled for what it actually is.

02 Technical Skills

The tools I actually build with, grouped by what I use them for. No certifications sit behind any of these. Every one was picked up through self-directed practice.

Frontend Development

Interfaces and layout

HTML5

CSS3

JavaScript

Every interface in this portfolio is hand-written: semantic HTML, CSS for layout and type, JavaScript for behaviour. No frameworks yet.

Backend & Programming

Logic, services and scripting

C++

Python

Node.js

C++ came out of engineering coursework, Python for scripting and problem-solving, Node.js for server-side JavaScript.

Engineering CAD

Technical drawing and modelling

AutoCAD

Autodesk Inventor

2D drafting and technical drawing in AutoCAD; 3D parts and assemblies in Autodesk Inventor, alongside the aerospace degree.

Creative Software

Graphics, brand and 3D

CorelDRAW

Adobe Photoshop

Blender

Vector layout in CorelDRAW, image and brand work in Photoshop, and 3D modelling in Blender as the bridge into animation.

Tools & Technologies

How the work gets built, tested and shipped

Git / GitHub

Version control and publishing code

Docker

Running services in consistent environments

Vercel

Deploying front-end builds

Postman

Testing and inspecting APIs

VS Code

Main editor for every project here

Figma

Interface design and layout before the build

How to read this list. A tool is listed because I have built something with it, not because I have read about it. The four items under "currently learning" are kept separate for exactly that reason.

Currently Learning

Active, not yet claimed as a skill

Unreal Engine

Blender (Advanced)

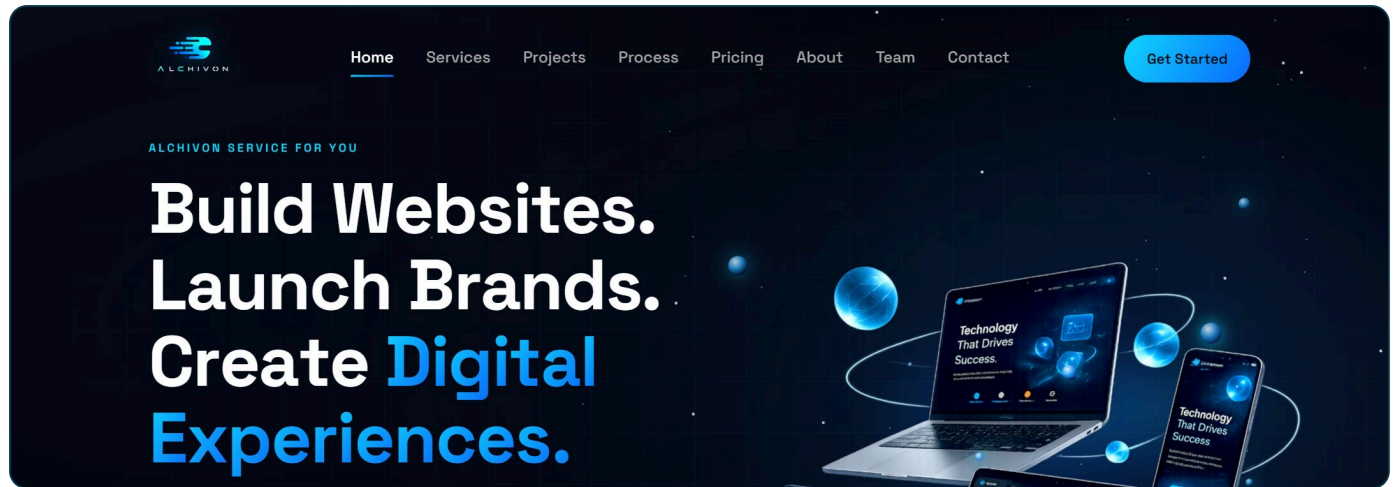

Game Development

3D Animation

Game development and 3D animation are the next direction. C++ carries over from programming into Unreal Engine, and Blender bridges the CAD and creative sides of the work.

03 Web Development

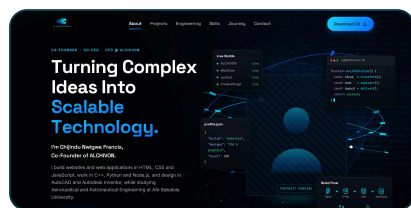

Six sites, all live. Two are ALCHIVON's own, the other four are demo builds I made to learn. Every screenshot below is the site as it stands today.

ALCHIVON Website

The company site for ALCHIVON, a multi-purpose technology studio working across web development, software, game development, AI and digital products. Live at alchivon.com.

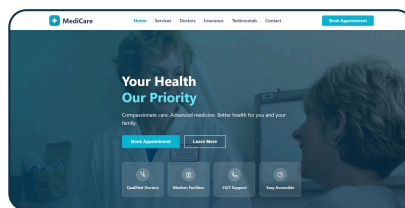

[Live](#) [HTML](#) [CSS](#) [JavaScript](#)

Personal Portfolio

portfolio-chijindu.alchivon.com. Hand-written, no framework, no build step.

[Live](#)

MediCare

Demo build. Healthcare site with appointment booking, doctor profiles and services.

[Demo build](#)

LexFord

Demo build. Law firm site covering practice areas, attorneys and consultation booking.

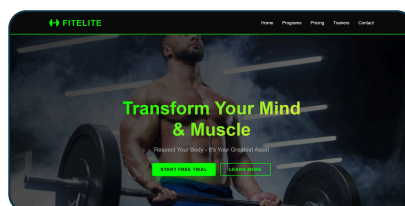

[Demo build](#)

CreativeForge

Demo build. Creative agency site with a work showcase and service breakdown.

[Demo build](#)

FitElite

Demo build. Fitness brand site covering programmes, trainers and membership plans.

[Demo build](#)

SOURCE

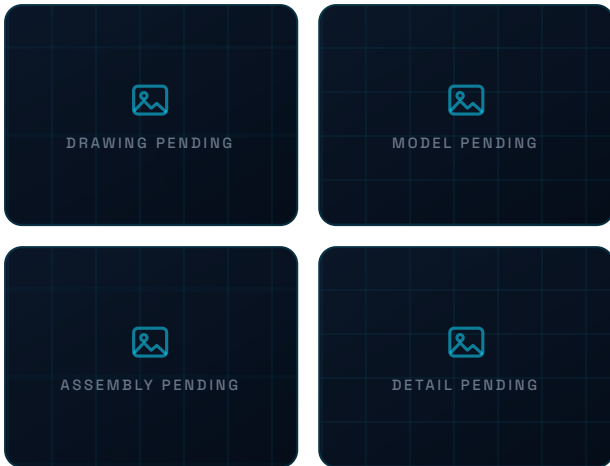

Public repositories, including work in progress, are on GitHub.

github.com/CJTHEREGREAT123

04 Engineering, CAD & Creative Work

The engineering side of the portfolio: CAD tooling learned alongside an aeronautical and astronautical degree, and the design work that sits next to it.

CAD & TECHNICAL DRAWING

- 2D technical drawing and drafting in AutoCAD
- 3D part modelling and assemblies in Autodesk Inventor
- Mechanical and aerospace concept work

[AutoCAD](#)[Autodesk Inventor](#)

GRAPHIC & 3D DESIGN

- Vector graphics and layout in CorelDRAW
- Image work and brand assets in Adobe Photoshop
- 3D modelling in Blender, with animation in progress

[CorelDRAW](#)[Photoshop](#)[Blender](#)

AERONAUTICAL & ASTRONAUTICAL ENGINEERING

The degree at ABUAD is the reason the CAD and programming sit together rather than apart. Aerospace work runs on modelling, simulation and iteration, the same habits that software rewards. Learning both at once means the engineering coursework has an outlet in code, and the code has something real to describe.

[200 level](#)[Expected graduation 2030](#)[Afe Babalola University \(ABUAD\)](#)

Image slots are intentional. Drawings, renders and design work are being selected for this section. Nothing has been filled with stock or placeholder work in the meantime.

05 ALCHIVON & Contact

ALCHIVON is a multi-purpose technology company building across web development, software solutions, game development, AI and digital products. I co-founded it and hold the Co-CEO and CFO roles.

MY ROLE

Co-Founder, Co-CEO & CFO

ALCHIVON · 2026 – Present

- Co-leading company strategy and direction
- Financial planning, budgeting and resource management
- Overseeing business operations and financial activity
- Collaborating on product strategy and the technical roadmap
- Supporting engineering research and development

HOW I WORK

01 Learn it properly, then use it

Everything here was self-taught, which only works if you go past the tutorial and build something with it.

02 Say what a thing actually is

A demo build is called a demo build. Work in progress is labelled as work in progress.

03 Engineering and software together

The aerospace degree and the code are not separate tracks; each one sharpens the other.

WHAT ALCHIVON BUILDS

Web Development

Software Solutions

Game Development

AI

Digital Products

Let's build something.

Open to collaboration, engineering projects and development work.
